

Western Blue was given the challenge to develop a file transfer process for all machines being migrated or replaced in the CWS/CMS HHSDC Project. We have incorporated the most effective process that includes all of the required file properties for this project. The following represents the current process.

- ✚ All CBT documents are deleted from the CBT Directory (Del c:\cbt\docs*.doc)
- ✚ All files on the Desktop are copied (xcopy32.exe c:\windows\desktop*.*)
- ✚ All files in the Favorites Directory are copied (xcopy32.exe c:\windows\favorites*.*)
- ✚ All files in the My Documents Directory are copied (xcopy32.exe c:\My Documents*.*)
- ✚ All DOC Files from the C: Drive are copied (xcopy32.exe c:*.DOC)
- ✚ All XLS Files from the C: Drive are copied (xcopy32.exe c:*.XLS)
- ✚ All PPT Files from the C: Drive are copied (xcopy32.exe c:*.PPT)
- ✚ All REP Files from the C: Drive are copied (xcopy32.exe c:*.REP)
- ✚ All PAB Files from the C: Drive are copied (xcopy32.exe c:*.PAB)
- ✚ All WAB Files from the C: Drive are copied (xcopy32.exe c:*.WAB)
- ✚ All PST Files from the C: Drive are copied (xcopy32.exe c:*.PST)
- ✚ All DOT Files from the C: Drive are copied (xcopy32.exe c:*.DOT)
- ✚ All UDO Files from the C: Drive are copied (xcopy32.exe c:*.UDO)
- ✚ All RS NOT MODIFIED Files from the C: Drive (xcopy32.exe c:\RS NOT MODIFIED.)

When the files are restored to the new Windows 2000 OS, a directory (old machine name) is copied on the D: Drive with all of the files above represented.

Another directory is created in the logged in user's My Documents folder that holds all PST, PAB and WAB files captured in the copy process. This directory is used to allow our technicians to complete the Outlook configuration.
